

Report #1

Instructions

The dataset contains a case study for a chemical company that manufactures plastic products. Recently, the performance of the company's flagship product has declined. You are unsure whether the problem is attributable to the **supplier of a raw material** or **whether it is due to a change in process conditions**.

The file at your disposal contains

- 24 objects (batches of plastic pellets)
 - Six characterizing measurements for batches of plastic pellets;
 - the outcome when using this material, either **Poor or Adequate**.
- 

Some variable names are coded for confidentiality.

- Lot number: unique identifier used by the company
- Outcome: categorical variable, either Poor or Adequate
- Size5: percentage material in a size range (coded)
- Size10: percentage material in a size range (coded)
- Size15: percentage material in a size range (coded)
- TGA: a measurement from a TGA device
- DSC: measurement from a DSC device
- TMA: a measurement from a TMA device

Compile a report for the corporate manager articulating your perspective on the topic at hand. To generate the report, it is recommended to create a *Rmd file (a concise guide with tips is accessible at the link <https://rmarkdown.rstudio.com/lesson-1.html>) from which you can automatically compile a PDF that includes the results of your analysis, the requisite code, and your commentary.
